

SUMMARY

Software Engineer (Full-stack / AI) with 2.5 years of hands-on experience building scalable, production-ready systems. Expertise in Python backend development using FastAPI, microservices, and modern data pipelines, combined with React frontend development. Strong background in AI-driven applications including chatbots, computer vision, and multimodal systems, with experience deploying and optimizing real-world services.

WORK EXPERIENCES

Python Developer (Backend/ AI)

Brillar

May 2025 - Current

- Owned end-to-end development of two AI-focused Python microservices, handling architecture, implementation, and production operations.
- Led backend development for a central integration service connecting multiple third-party systems (e.g., SalesIQ, Chatwoot, Zoho).
- Built a document ingestion service for file-to-text extraction to support AI and LLM-based workflows.
- Integrated LLM agent frameworks and optimized Dockerized deployments with a focus on performance, memory efficiency, and observability.

Techstack: Python (FastAPI), LLM frameworks, Docker, REST APIs, Data Pipelines, File Processing (Docling), Monitoring & Observability (Grafana), Git

Teaching Assistant & Software Development Intern

Rangsit University

August 2024 - December 2025

- Built backend services for internal systems, including a QR-based attendance system, job fair platform, and an alumni website (demo phase).
- Implemented QR attendance with location verification, saving approximately 15 minutes per staff member per class by reducing manual tracking.
- Developed a job fair system used by ~300 students, staff, and participating companies during a live event and designed for reuse.
- Built a course recommendation system adopted by ~100 students to support data-driven course selection.

Techstack: Python (FastAPI, Django), JavaScript (Node.js, Express, React), REST APIs, MongoDB, MySQL, Git

Freelance Web Developer

Myanmar

January 2021 - February 2022

- Developed full-stack web applications using Python backend and Bootstrap frontend for small business clients

Techstack: Python (FastAPI, Django), JavaScript (Node.js), Bootstrap, HTML/CSS

PROJECTS

Phishing URL Detection Model

Detecting Malicious Urls Using Machine Learning

January 2024

- Built a machine learning-based system to detect phishing URLs using datasets collected between 2019 and 2024. The project performs URL feature extraction and evaluates multiple classification models to identify malicious links, achieving up to 94% accuracy.
- The trained models are serialized for reuse and deployment.

Tech stack: Python, pandas, NumPy, scikit-learn, joblib

Eco-mart and Next Thai | Hack the Zodiac Hackathon

Your AI Assisted Travel Planner and Eco-friendly Shopping Advisor April 2024

- 2nd Runner-Up (30+ teams) at Hack the Zodiac Hackathon 2024 for innovation and functionality.
- Built two AI-powered solutions: a sustainability-focused shopping advisor aggregating product data from Amazon, Lazada, and other e-commerce platforms with eco-friendliness scoring and top-5 recommendations, and an AI travel assistant that generates personalized Thailand itineraries using LLM-based recommendations with downloadable PDF travel plans.

Tech stack: Python, Streamlit, Google GenAI, Requests, RapidAPI, ReportLab

SPLASH Golf Club | CIMSO Hospitality ERP Hackathon

A Modern System for Golf Clubs March 2025

- Won 1st Place out of 20+ teams in a frontend hackathon by developing a React-based golf club management system integrated with CIMSO's ERP.
- Built a golf club management system with a React-based frontend integrated with CIMSO's ERP, and implemented an AI-powered multilingual, voice-enabled chatbot to automate booking workflows and enhance user experience.

Tech stack: HTML, CSS, JavaScript, React, Axios, Tailwind CSS

Computer Vision Games

An project for RIC Openhouse August 2025

- Selected from among peer projects for official showcase at the RIC Open House, featuring a real-time hand-gesture controlled game system (Fruit Ninja, drawing app, Rock-Paper-Scissors).
- Presented the project to 5+ faculty members and hundreds of students through live demonstrations.

Tech stack: Python, OpenCV, MediaPipe, Pygame

More projects available at: Portfolio Website

TECHNICAL SKILLS & PROFICIENCIES

- Languages & Backend: Python, SQL, JavaScript, C#, FastAPI, Flask, Django, REST APIs, Async programming, Microservices
- Frontend: React, Node.js, Express.js, Bootstrap, HTML/CSS
- AI / Data: Generative AI, LLMs, RAG (Retrieval-Augmented Generation), NLP, Computer Vision, PostgreSQL, MongoDB, Data Pipelines, Web Crawling
- DevOps & Tools: Docker, CI/CD, Logging & Monitoring, Git, GitHub, Postman

EDUCATION

Rangsit University B.Sc. IT

Bachelor of Science in Information and Communication Technology
First Class Honors | GPA: 3.96 / 4.00

Coursework Completed; Graduation Date: December 2026

Relevant Coursework: Data Structures, Database Systems, Machine Learning, Business Intelligence, IT

BEHS 2 Mayangone Highschool Diploma

CERTIFICATIONS

- Machine Learning from from: University of Washington on Coursera. Certificate earned at July 9, 2020
- Python for Everybody from University of Michigan on Coursera, Certificate earned at June 10, 2020
- Mathematics for Machine Learning from Imperial College London on Coursera. Certificate earned at November 13, 2020
- Deep Learning by DeepLearning.AI from Coursera. Certificate earned at September 26, 2020
- ASEAN Data Science Explorers, 2023 SAP Analysis Cloud Certificate earned at 2023
- Foundational C# With Microsoft. Certificate earned at January, 2026
